## Education

2014-2019 **Department of Electrical and Computer Engineering** University of Toronto  
*Bachelor of Computer Engineering* (CGPA 3.1)  
Dean's Honours List (April 2015, December 2016)

## Technical Skills

**Languages:** C/C++, C#, VB, Java, Ruby, Python, Verilog, Assembly, HTML/CSS, MatLAB, JavaScript, JQuery, LaTeX, PHP, XML, SQL, PowerShell

**Software:** Altium, Dreamweaver, ModelSim, MultiSim, SolidWorks, Quartus, Unity, Visual Studio

**Courses:** Algorithms and Data Structures, Computer Networks, Communication Systems, Dynamic Systems and Control, Fundamentals of Optics, Probability and Applications

## Professional Experience

2016 May **Software Developer Intern** Bell Canada

- Developed and unit-tested callflow orchestration scripts for a Genesys Callcenter system
- Developed an end to end regression testing system with Empirix Hammer
- Developed an Audio File Monitor that tracks all audio files played in a call center

2016 Jan **Undergraduate Researcher** UHN Department of Rehabilitation

- Researched a device which measures obstructions on city pavement
- Designed a optical/mechanical device that traces bumps on the sidewalk

2015 Sept **Design Center Assistant** University of Toronto

- Assisted students for signing digital laboratory equipment

## Academic Experience

### ENGINEERING STUDENT GROUPS

2015-17 **UTRA RoboSoccer Lead - Computer Vision** *University of Toronto Robotics Association*

- Integrating OpenCV with ROS (Robotic Operating System) to localize field markers and relative position of the humanoid robot's position
- [Working with Strategy and Control team](#) to create Artificial Intelligence and Control and Models for the Robocup [simulation league](#) in 2018

2015-16 **NETtalk and Communications Lead** *Hacker Academy*

- Facilitated and Delivered NETtalks to students interested in a new field of technology

- Communicated with Sponsors such as GE and created the Machine Learning challenge for the DeepHealth Hackathon, University of Toronto's first healthcare and AI themed hackathon.

## DESIGN PROJECTS

2014-Now	<b>Macabre III</b> - <i>Middle age pixellated role playing game made using Unity Engine</i>
2016 April	<b>Edge Detector</b> - <i>Camera edge-detecting software made with NIOS Assembly using 2DFFT filters</i>
2016 Nov	<b>Wireframe Drawer</b> - <i>Simple wireframe drawing hardware made with Verilog HDL</i>
2016 Feb	<b>Student Club Index Searcher</b> - <i>Engineering student club search bar made with Wordpress, PHP AJAX and SQL</i>
2016 Jan	<b>SaberWars</b> - <i>Used Unity's TCP/IP capability with Android Phones to create multiplayer for the Hack-TheNorth hackathon. Got in 4th place.</i>
